ITW Thermal Films adds B120, B121 and B128 Wax/Resin Products to its TTR Almanac™

ITW Thermal Films is pleased to announce that its TTR Almanac™ online sales tool has recently been updated to include three of its versatile wax/resin products – B120, B121 and B128 for use on flat head technology printers.

- **B120** is a premium wax/resin grade that is specially formulated to withstand harsh work environments, and is designed to use low energy release requirements at high speeds, extending your printhead's life.
- **B121** is a versatile wax/resin grade thermal transfer ribbon that is designed for the high volume labeling segment, and features exceptional versatility at high speed over an extremely broad range of both paper and film media substrates.
- **B128** is a durable wax/resin that offers superior UV and smear resistance, and is a logical choice for outdoor applications such as nurseries, lumber and steel applications, where strong abrasion and environmental resistance is required.

Easy to use, the TTR Almanac is the only interactive online tool in the AIDC industry that allows you to quickly get print test results on a wide variety of TTR on various stocks and printers.
